

DEVnet is offering highly specialized consultancy services in the financial markets as well as in energy and commodities for over a decade. DEVnet has developed an excellent reputation for supplying and implementing sophisticated solutions in key areas such as risk management, trading and data processing for leading financial institutions, corporations and utilities across the continent.

We are expanding our team in Wroclaw due to our growing business, offering career opportunities for

Software Engineers (Java)

As part of our IT team you will work closely with our business consultants designing and implementing software solutions for our international customers. You will be utilizing highly specialized approaches combining mainstream development environments like Java, .Net and scripting languages with advanced enterprise environments. Our environment is highly agile and exposes you to modern development methodologies.

Requirements:

- Sound knowledge of software engineering practice: design, architecture and implementation
- Excellent knowledge of Java and its development environment
- Good command of at least one additional programming language
- Degree in computer science, mathematics, physics or a relevant scientific discipline
- Proven practical programming experience
- Experience with application servers and Unix/Linux environments
- Good command of English is essential, German an advantage
- Readiness to travel abroad
- Personal interest in financial or engineering topics is an additional asset
- Working experience is advantageous, though not required. Graduates are welcome

We offer:

- Expert training in finance and various IT related topics
- Working in an international environment
- Opportunity for constant individual development
- Attractive compensation packages

We look forward to meeting you in Wroclaw.
